

Vulnerability Management Platform allows Clients to Stay Ahead of Cyber Threats

The risk of being hacked continues to rise as bad actors find new ways to infiltrate networks. While every effort is made to safeguard systems, the target keeps moving. That's why **Allied World // FrameWRXSM**, working with industry expert CyRisk, is offering our Cyber insureds access to a Vulnerability Management Platform. This platform, provided at no additional cost, not only conducts real time scanning to monitor and report vulnerabilities (and recommend fixes), it continues to monitor systems and contact clients should a new risk emerge.

ALLIED WORLD CYBER CLIENTS HAVE THE POWER

Using this Vulnerability Management Platform, our Cyber clients have one more tool designed to reduce the risk of:

- ransomware attacks
- data breaches
- phishing attacks
- business email compromise
- supply chain compromise
- compliance fines and penalties

PLATFORM COMPONENTS

Monitoring: Automated security scans of attack surface/assets checking for vulnerabilities, configuration errors, security weaknesses, out-of-date software, reputation block listing, email security, website security, network security, information disclosure, and other cyber risks to:

- Capture historical risk profile performance
- Prioritize recommendations
- Monitor the environment for changes
- Produce proof of compliance

Reporting: Receive detailed and high-level reports to share with internal cyber security stakeholders to demonstrate cyber security posture, show improvements and identify potential areas of exposure for better allocation of resources.

Vendor Risk Management: A key area of vulnerability comes from third party vendors. This platform helps keep vendors in compliance with your organization's cyber security objectives (including customer compliance and supply chain tracking).

Self-Assessments: Assess and check readiness against major compliance frameworks and provide evidence of completion.

Prescriptive Threat Intelligence: Timely threat intelligence with zero-day health checks relevant to specific assets in the environment based on short questionnaires that help insureds determine whether they are at risk, and if they have implemented current remediation guidance. CyRisk will:

- Share credible, cyber threat intelligence and urgent security warnings in real time
- Provide mitigation advice when critical threats arise

Professional Support: Cybersecurity professionals are available to help clients understand the reports and recommendations with:

- One-hour onboarding session to introduce the CyRisk platform
- One-hour consultation on scanning outputs
- Unlimited email support

HOLISTIC CYBERSECURITY PROTECTION

CyRisk is an industry expert in procuring end-to-end security and compliance alignment by putting powerful cyber risk analysis tools and enterprise-grade cybersecurity protections in the hands of organizations of all sizes. Their platform, CyRisk Director, is dedicated toward improving the cyber risk posture of client organizations, allowing them to stay ahead of attackers with full visibility and analysis of their attack surface and supply chain risk. In today's cyber risk averse world, this translates into enhanced security for clients, their supply chains, and ultimately, their customers.
